Benchtop Laser Ampule Marker

ViaLabel introduces a laboratory bench top laser marker for Ampules. The DT2A1 marks high quality barcodes and man- readable characters onto blank , white , pre-patched ampules. In the example shown , the ampule is identified with a 2D (PDF417) barcode containing host downloaded , keyboard entered, or bar code scanned data.

The markings will survive both long term and cyclic liquid nitrogen immersion. High mark contrast assures robust reading throughout the laboratory. Marking time is less than 10 sec. ampule to ampule.
